

18 April 2019

Dear Sir/Madam

**DEVELOPMENT APPLICATION: PROPOSED AGRICULTURE INTENSIVE – PERENNIAL HORTICULTURE (ORCHARD)  
ADDRESS: LOT 1 SAPPERS ROAD, NILGEN**

This letter is written to invite you to comment on an application received for the development of an Agriculture Intensive – Perennial Horticulture (Orchard) at the abovementioned address.

Local Planning Scheme No. 9 (LPS No. 9) provides a basis for the control of development / land use throughout the Shire of Gingin. When a development may impact on the amenity of adjoining property owners, comments may be sought by the Shire from those potentially impacted. Following consultation, Shire officers will undertake an assessment against the 'objectives' of the 'General Rural' zone prior to determining the application.

With respect to the abovementioned development application, the following is proposed:

- Growing of orchard trees up to 154 ha. The proposal is seeking a setback variation to all of its lot boundaries, proposing to be a 10m setback in lieu of the required LPS 9 setback of 20m.
- The introduction of the proposed Agriculture Intensive – Perennial Horticulture (Orchard) use is to co-exist with the existing Agriculture Intensive – Annual Horticulture (Market Garden) use.

As a potentially affected owner you are invited to comment on this proposal **within 21 days from the date of this letter** (by 9 May 2019). Should no written comment be received, the Shire may determine the application without your response.

Plans and documents setting out and explaining the proposal have been attached for your information. Should you make a submission, please note that your details may be made public at a Council meeting and included in a Council Agenda, which will be available on the Shire's website, unless you specifically request otherwise on the stakeholder comment form.

Should you have any queries or wish to discuss the application, please contact the Shire's Planning Department.

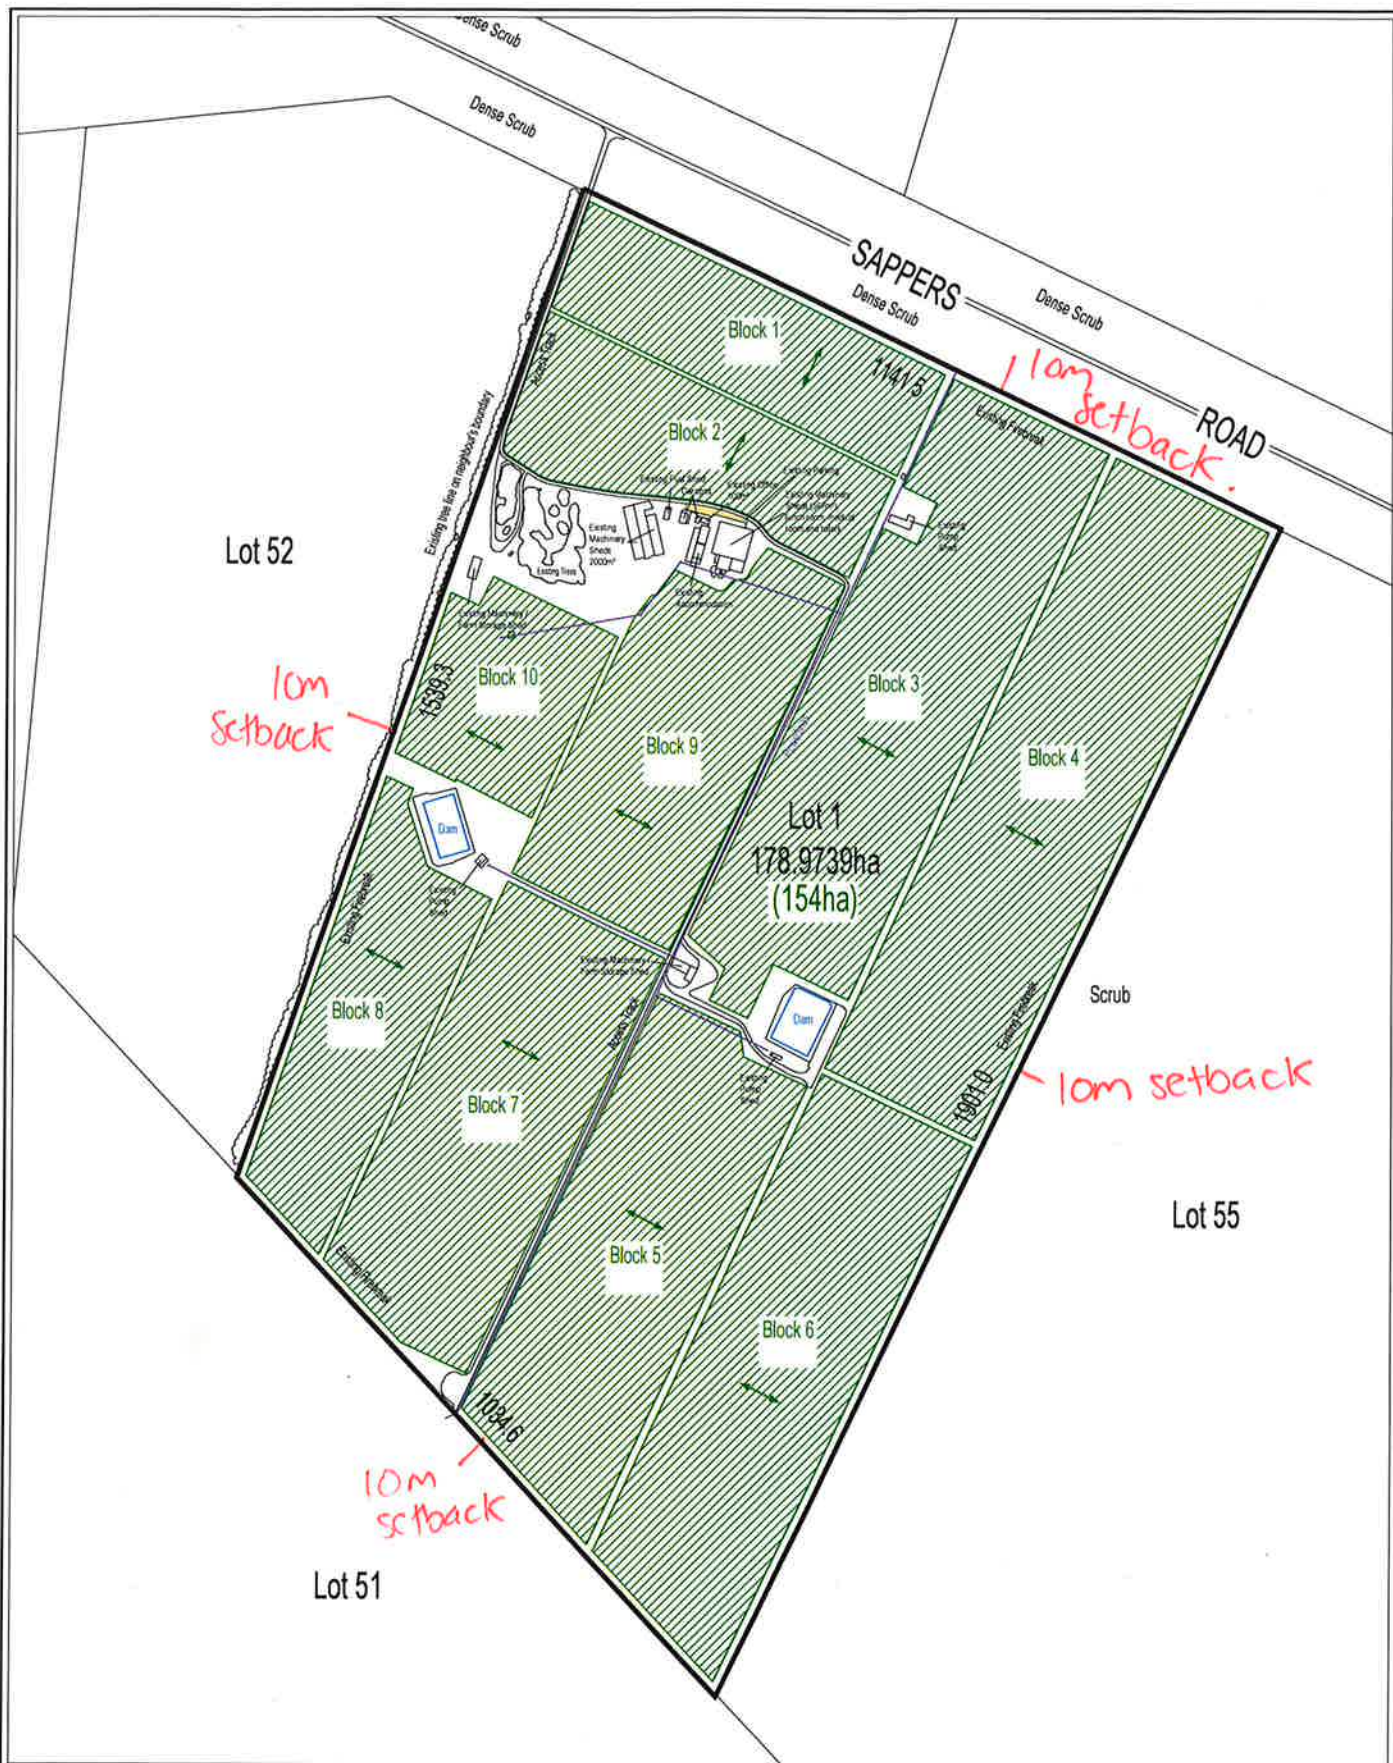

Yours sincerely

A handwritten signature in black ink, appearing to read "Kylie Bacon".

NOTE:  
Dimensions and areas subject to survey.

LEGEND:

- EXISTING OVERHEAD POWERLINES
- FIELD BOUNDARY - TOTAL AREA 154.0ha
- TREE ROW DIRECTION

Note:

1. Wire fencing with steel posts and ringlock exists around entire site.
2. Trees will be planted as follows:  
Planting density - up to 600 trees per hectare  
Rows are 5 - 7 metres apart  
Trees are 3 - 6 metres apart  
10 metre buffer to site boundary

March 2019

Dear Sir/Madam

Application for Planning Approval  
Agriculture Intensive – Perennial Horticulture  
Lot 1 Sappers Rd, Karakin WA 6044

## Introduction

Keyes Ag Holdings lodges this development application for the establishment of a perennial tree orchard and requires the land use of the above-mentioned property changed from Agricultural Intensive – *Annual Horticulture* to Agricultural Intensive – *Perennial Horticulture*.

Please find enclosed;

- Completed Planning Application Form
- Certificate of Title
- Site Plan / Farm Map
- Water Licence Operating Strategy
- Environmental Site Inspection Report information
- Cultural Heritage Information
- Farm Management Plan

## The Location

The property is located on Lot 1 on Deposited Plan 61629 and being the whole of the land in the Certificate of Title Folio 796, Volume 2730, Sappers Road Karakin WA 6044. This site has a land area of approximately 179.01ha. The land is presently zoned *Agriculture Intensive* under Local Planning Scheme No. 9 (LPS 9) in the Shire of Gingin. The land is currently used for purposes within this approval. There is a small portion of the property comprising of some remnant vegetation adjacent to the shed and processing area.

Improvements on the property comprise of numerous machinery and processing sheds, accommodation and staff facilities, and an office, which are all approved by Gingin shire. See plan attached for more details.

The site is surrounded by other agricultural enterprises on all four sides and the eastern boundary is adjacent to Sappers Road.

The site is accessible by an all-weather internal gravel road from Sappers Roads. The shire has recently upgraded the section of Sappers Road that the land parcel adjoins. The internal gravel access road through the property is maintained regularly as the land parcel is currently operated as an intensive vegetable growing and processing site.

## The Proposal

### Overview

The application seeks to develop a tree orchard, which also requires a land use approval to change it from *Agricultural Intensive – Annual Horticulture* to *Agricultural Intensive – Perennial Horticulture*. The land will be primarily used for the planting of horticultural tree crops once full development has occurred, but will also include vegetable and cover crops in line with agricultural best management practices until the development has been completed as planned over a 5 year time period. The extent of the area of the orchard is shown on the enclosed plan and comprises a slightly smaller footprint to the land presently used for intensive vegetable production, due to the increased set back distance from the boundary fences now proposed to be 10 metres from the current 5-8 metres in most areas. This property has recently been purchased by Keyes Ag Holdings Pty Ltd and a copy of the Landgate title accompanies this application.

### Water licencing

The site has an existing extraction licence, which is included in the sale of the land parcel and attached for reference. An application to transfer the licence from the present owners is under review by the Department of Water, Environment and Resources and we expect this to be transferred with the first quarter of 2019. An Operating Strategy for the extraction of the water has been compiled, which will also include the monitoring of the water quality.

In addition to the Operating Strategy, we strive for best management practices for nutrient management and irrigation procedures to maximise plant health, growth and productivity; while minimising any impact on the environment. These practices include;

- Drip irrigation for efficient water usage of the groundwater resource. This usage is monitored daily and drainage water is calculated to assist in conserving water usage, managing the effect on the plants and soil after natural rainfall event effects and maximise per kilolitre per plant water use efficiency.
- Time controlled nutrient delivery to the plant. Orchard nutrient levels are calculated, and the application of nutrients are adjusted to meet the crop stage, climate and feedback from the monitoring systems.

- Regular water, soil and plant samples are collected for analysis and assessment to best management practices guidelines to ensure the short- and long-term sustainability of orchard operation to achieve the environmental and economic objectives.

As this development is for the establishment of a new orchard, we are able to implement an orchard design and management system that will not only be highly sophisticated using the latest industry technology, techniques and infrastructure, it will also provide employment opportunities within the Gingin shire.

### Wetlands

There are no identified wetlands within the parcel of land or within a 200 metre region of the proposed orchard. An independent environmental site inspection report has been undertaken and attached for reference.

### Cultural Heritage

There are no identified cultural heritage areas identified within the parcel of land. An independent cultural heritage report has been undertaken and attached for reference.

As part of the induction process, all staff and contractors are provided with our Cultural Heritage policy and procedure for the event that during the development or general business operation a possible cultural heritage site is discovered. This is managed by the farm overseer under the instruction of the Director.

### Policy and Statutory Framework

#### Zone

The site is zoned *Agriculture Intensive – Annual Horticulture* under Local Planning Scheme No. 9 (LPS 9) in the Shire of Gingin which designates *Agriculture Intensive* as a primary land use. Our intention is to modify the zoning to *Agricultural Intensive – Perennial Horticulture* to allow for the orchard development and the policy requirements are considered in the table below.

#### Proposed use – definition

The land use is classified as *Agriculture – Intensive*. This means premises used for trade or commercial purposes, including outbuildings and earthworks, associated with the following;

- a) The production of grapes, vegetable flowers, exotic or native plants, or fruit or nuts;
- b) The establishment and operation of plant or fruit nurseries;
- c) The development of land for irrigated fodder production or irrigated pasture (including turf farms); or
- d) Aquaculture.

Present use of the land described in the Local Planning and Policy Statement No. 1.6 Agriculture Intensive – Clause 3.1 General Standards and Clause 3.2.1 Annual Horticulture (Market Gardens & Floriculture)

Local Planning Policy Statement No. 1.6 Agriculture Intensive  
 Clause 3.1 and Clause 3.2.2 apply to this application.

General Standards – Requirement	Comment
3.1.1 Applicants shall demonstrate compliance or intended compliance with the standards set out in this policy at application stage.	<b>Complies</b> This letter is to be attached to the application and addresses compliance requirements.
3.1.2 Council will process development applications for Irrigated Horticulture purely on land use planning grounds, without regard for viability considerations, such as Water Licensing. All Planning Approvals will be copied to the Department of Water for its records in dealing with Water Licensing.	<b>Noted</b> The viability is not a consideration for this approval. DWER has an application to transfer the water licence attached to this parcel of land to our entity. The existing allocation is sufficient for the proposed orchard.
3.1.3 Where it is intended to clear “remnant vegetation” as defined under the Soil and Land Conservation Act, for the proposed development, the application should be accompanied by a letter of non-objection to the clearing (a clearing permit) from the Commissioner for Soil and Land Conservation.	<b>N/A</b> No cleaning of remnant vegetation.
3.1.4 All applicants shall clearly indicate areas of vegetation, wetlands and any other physical characteristics on the plans accompanying an application.	<b>Complies</b> The site plan attached indicates the relevant areas. There are no wetlands within the development area.
3.1.5 Waste material generated from the horticultural activity shall not be stored on the property in a manner that facilitates fly breeding or odour emissions, but shall be either buried, treated or removed off-site to Council’s satisfaction.	<b>Noted</b> It is assumed this can be conditioned.
3.1.6 Horticultural waste to be trashed for soil improvement shall be turned into soil within two days of the removal of the crop or portion of the crop to Council’s satisfaction.	<b>Noted</b> It is assumed this can be conditioned.
3.1.7 Clearing of riparian vegetation is prohibited. In the case that a foreshore area adjacent to an intensive horticulture activity has been cleared, it should be revegetated with species endemic to the area.	<b>N/A</b> No riparian vegetation is intended to be cleared as part of this development.
3.1.8 Proposals for Irrigated Horticulture located within 500 metres of an identified existing or future Residential or Rural Residential area shall only be considered where it can be demonstrated that effective vegetation buffers and other measures will satisfactorily minimise or avoid potential land use conflict.	<b>Complies</b> This parcel of land holds an existing approval with Gingin Shire for Intensive Horticulture management. A set back of 10 metres from the boundary will also be adhered to and it assumes this can be conditioned. Please see site plan attached for further demonstrations of vegetation buffers and other measure to minimise and avoid potential land use conflict.
3.1.9 All horticulture activity (excluding tree farms) shall have a minimum distance of 200	<b>Noted</b>

<p>metres, or a distance satisfactory to Council, from any Conservation Category Wetland, as defined and identified in the Water and Rivers Commission's Geomorphic Wetland Database, or defined through other means acceptable to Council. Included within this minimum distance there shall be a dense native vegetation buffer of not less than 20 metres in width, to be established prior to the commencement of development and maintained for the duration of the development.</p>	<p>There are no identified wetlands within the parcel of land or within a 200 metre region of the proposed orchard. A set back of 10 metres from the boundary will also be adhered to as presently the current operation has less than this a buffer and it is assumed this can be conditioned. An independent environmental site inspection report has been undertaken and attached for reference.</p>
<p>3.1.10 Where a lesser setback to waterways (as specified in this Policy Statement) is proposed, a Drainage, Nutrient and Irrigation Management Plan shall be prepared and be to the satisfaction of the Water and Rivers Commission and Council.</p>	<p><b>N/A</b> We are not seeking any setbacks in this application.</p>
<p>3.1.11 All irrigated horticulture activity shall be set back 500 metres from any Rural Living, Residential, Tourist, Commercial or Urban Development zones. Applications for reduced set backs shall be accompanied by comprehensive data and evidence that supports the proposed reduction.</p>	<p><b>Complies</b> This parcel of land holds an existing approval with Gingin Shire for Intensive Horticulture management. Please see site plan attached for further demonstrations of vegetation buffers and other measure to minimise impact on rural living.</p>
<p>3.1.12 All Planning Approvals for Irrigated Horticulture will incorporate the following Advice Notes to the Applicant: a) The Applicant is reminded that this Planning Approval is not to be interpreted as approval to extract and utilise groundwater supplies, nor does it imply that the Shire of Gingin has knowledge in relation to availability of groundwater supplies. b) The Applicant is reminded of the need to seek and obtain a suitable groundwater licence from the relevant licensing authority prior to utilising the land for Irrigated Horticulture.</p>	<p><b>Noted</b> Groundwater supply allocations attached to this parcel of land have been attained for the intended use from DWER. See licence transfer attached.</p>
<p>3.2.2 Perennial Horticulture "Perennial Horticulture" refers to the commercial production of all varieties of longlived fruit, vine and nut species, generally deep rooting, where the land is only cultivated deeply at the initial planting stage, but may be regularly fertilised. Applicable Standards: • All perennial horticulture shall achieve a minimum set back of 50 metres from the highest known level of a waterway (riverine environments).</p>	<p><b>Noted</b> This application is for perennial horticulture and shall achieve a minimum set back of 50 metres from the highest known level of a waterway. A set back of 10 metres from the boundary will also be adhered to and it is assumed this can be conditioned.</p>

### Staged development

This development is planned to be staged over 5 years and as per discussions with Council we are requesting it to be conditioned that over this time period the following agricultural activities are permissible until the full orchard is planted. This will allow the continuation of annual cropping in areas of the property that are yet to be planted to remain under the production of vegetables and cover crops to stabilise the soil. The development timing will be determined in conjunction with other projects we are undertaking and our request that it can be conditioned parts of the property are able to change zoning over the planned 5 years development timeline as indicated below. Our intentions for the continuation of the annual cropping and the planting of the perennial orchard over the next 5 years are as follow;

#### 2019 to 2020

- up to 18ha of orchard in Blocks 1 & 2
- up to 160ha of vegetable production Blocks 1 - 10

#### 2021 to 2022

- up to 120ha of orchard in Blocks 1 – 8
- up to 160ha of vegetable production Blocks 1 – 10

#### 2023 to 2025

- up to 154ha of orchard in Blocks 1 – 10
- up to 80ha of vegetable production in Blocks 6 – 10

As vegetable production in the area is generally undertaken from February to November and the planting of orchards is not desirable in the autumn and winter months, the figures indicated above overlap as preparation for the orchard development and plantings occur. It is assumed this can be condition and we are open to working with council to assist with your requirements for a development of this type.

### Conclusion

Keyes Ag Holdings are requesting to develop a perennial tree orchard and change the land use from *Agricultural Intensive – Annual Horticulture* to *Agricultural Intensive – Perennial Horticulture* for the establishment of an orchard on Lot 1 Sappers Rd, Karakin. This new development will implement an orchard design and management system that will not only be highly sophisticated using the latest industry technology, techniques and infrastructure, it will also provide employment opportunities within the Gingin shire. The required water allocations have been obtained and as part of the Groundwater Allocation Licence and Operating Strategy, a comprehensive monitoring of various groundwater parameters will be implemented.

The development is planned to be undertaken over the next 5 years. We are requesting council it be conditioned that the existing annual vegetable production remains a permissible activity on the block areas outlined above until these areas are planted for the orchard in the later stages of the development.

The proposed development will result in a productive land use of the parcel and we believe that this application satisfies the General Standards requirements as stated in the Local Planning Policy Statement No. 1.6 Agriculture Intensive, Clause 3.1 and Clause 3.2.2.

There are no identified wetlands or cultural heritage sites within the development area.

I trust the information provided satisfies the requirements of the Shire of Gingin and our proposal can be supported.

If you have any further queries, please don't hesitate to contact me. Thank you in advance for your assistance with this matter and we look forward to receiving your response and working with the Shire on the development.

Kind Regards

A handwritten signature in black ink, appearing to read 'John McKenzie', written in a cursive style.

## Farm Management Plan

Lot 1 Sappers Rd, Karakin WA 6044

### Overview

Keyes Ag Holdings is proposing to develop a perennial horticultural operation on the existing agricultural intensive zoned land known as Lot 1 Sappers Rd, Karakin. This farm management plan is provided to supply the necessary information to support the development application at the above mention property.

### Intellectual Property Protection Clause

This farm management plan is for the express use of the planning approval and cannot be used by any officers or council or councillors for any other use.

### Spray and Dust Management

The requirement for spraying of the orchard will be minimised through the practice of not spraying in high winds or adverse condition and the inclusion of some non-fruit bearing trees adjacent to the boundary to reduce spray drift.

Any application of spray will be through coarse droplets nozzles in the spray pattern to further minimise drift. We will also adhere to all product label requirements to minimise any effect to our neighbours and non-orchard plants.

Working together with local agronomic and production consultants, we aim to maximise efficiencies for plant health and minimise the requirements for spray inputs.

To reduce dust and soil erosion, the promotion of groundcover across the property will be undertaken through initially in the early years the planting of cover crops to stabilise the soil, weed control and retain soil moisture. In the latter years, regular slashing for the management of existing groundcover, regular planting of inter row cover crops and other best management practices to promote ground cover will be undertaken.

A minimum buffer of 10 metres from any perennial crops to the boundary will be adhered to. In areas where the risk of spray and/or dust drift is deemed to be heightened on our neighbours, we would consider the planting of trees adjacent to the fence line as a way to mitigate this issue.

### Waste Management

During harvest the fruit will be harvested and transported to the existing on-farm processing and packaging facility. Any foliage or other green waste from the operation will be periodically slashed

to be incorporated into the ground in conjunction with the ground cover management activities to assist the rapid decomposition of material and the management of pests and disease.

An excess waste from the processing process will either be composted on site or transported off site to an appropriate disposal facility.

### Water Management

Water will be applied through the use of drip irrigation and the latest technologies and techniques for best water use management practices.

Soil moisture monitoring and weather station climate monitoring, to measure evapotranspiration, will be employed to assist with the water management.

Water licence No. 99673 is attached and approved for use on this parcel of land and all reporting and monitoring will be governed by DWER guidelines and requirements.

### Traffic Management

The main access to the property will continue through established entrance on Sappers Road, which the shire has recently upgraded. This all-weather access road is in the north east of the farm. It is maintained regularly as the land parcel is currently operated as an intensive vegetable growing and processing site. Until the orchard has reached maturity in 5-8 years' time, traffic will be in accordance with the existing farm management plan lodged with council, with infrequent increases in traffic when certain irrigation infrastructure and orchard development materials are delivered and/or installed.

Once the orchard has reached maturity, traffic during May to November will be approximately 10-15 vehicles per day. This will increase over the months of December to April to approximately 17-25 vehicles. With staff accommodation facilities on site presently for approximately 18 people, this will also assist in limiting traffic entering and exiting the site on a daily basis.

The farm will be sign posted with 40km/hr speed signs and the use of any on farm vehicles will be granted to people only once they have been through our induction process for best farm management practices and work health safety.

### Additional Services

There is an existing electricity supply to the processing facilities, groundwater pumps, accommodation facilities and office buildings. The existing supply meets the needs of the development. No additional electricity requirements are presently planned for this development.

As this is an existing intensive horticulture operating site, all existing buildings and associated infrastructure have been approved by Gingin Shire in earlier Development Applications by previous owners. A copy of these can be supplied upon request if required.
